## Documentation

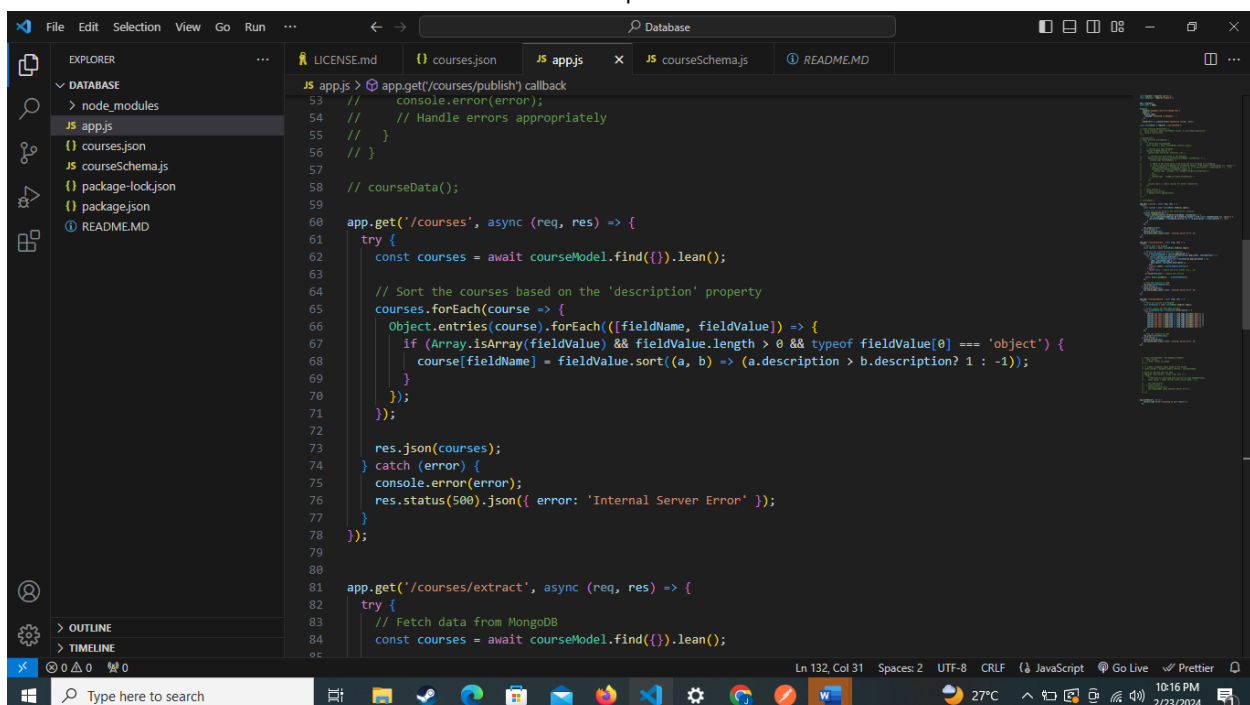

### Test Procedure

First is I struggle to setup the database cause I cannot import the json file, in the direction is there is not said that need the path of the json file. And I watched youtube video to fix the problem. Then I procced to connecting the database and make sure that the mongodb is running.

```
1 const express = require('express');
2 const mongoose = require('mongoose');
3
4
5 app = express();
6 const port = 3000;
7
8 mongoose
9   .connect('mongodb://127.0.0.1/mongo-test')
10  .then(() => {
11    console.log({
12      message: 'Connected to Database...',
13    });
14  })
15  .catch((err) => console.error('Connection failed', err));
16
17 const courseModel = require('./courseSchema');
18
19 // async function getCourses() {
20 //   const courses = await courseModel.find({}).sort({description:1});
21 //   console.log(courses);
22 // }
23
24 // getCourses();
25 // async function courseData() {
26 //   try {
27 //     // Fetch data from MongoDB
28 //     const courses = await courseModel.find({}).lean();
29 //
30 //     // Iterate over each document
31 //     courses.forEach(course => {
32 //       console.log('Course ID: ${course._id}');
```

### Sort the description from a - z

```
53 // console.error(error);
54 // // Handle errors appropriately
55 // }
56 // }
57
58 // courseData();
59
60 app.get('/courses', async (req, res) => {
61   try {
62     const courses = await courseModel.find({}).lean();
63
64     // Sort the courses based on the 'description' property
65     courses.forEach(course => {
66       Object.entries(course).forEach(([fieldName, fieldValue]) => {
67         if (Array.isArray(fieldValue) && fieldValue.length > 0 && typeof fieldValue[0] === 'object') {
68           course[fieldName] = fieldValue.sort((a, b) => (a.description > b.description ? 1 : -1));
69         }
70       });
71     });
72
73     res.json(courses);
74   } catch (error) {
75     console.error(error);
76     res.status(500).json({ error: 'Internal Server Error' });
77   }
78 });
79
80
81 app.get('/courses/extract', async (req, res) => {
82   try {
83     // Fetch data from MongoDB
84     const courses = await courseModel.find({}).lean();
```

Output from postman

```

By doing this activity I cannot understand the instruction that is why I struggle to this activity, I don't know what are need to sort and to extract. And solution that I made is to search from online and watch the youtube tutorial. Because the provided module is I cannot understand too, I think the provided module is far from the activity.
